Battery - OGIV Type		47

The concept of the central battery system provides a supply of the connected safety and emergency luminaires from a central point.

Installed in an operating room central battery systems are connected with fire resistant wires to the lights.

Per 19" cabinet up to 96 circuits and 1,920 operated lamps can be realized.

Up to 256 main stations includes MC6, MNXL, MD32 & ML96 can be linked together with PC via TCP/ IP with one another and thus can be monitored together. This increases the possible number of lamps more than a million.

Our central power supply systems can be built in various housing sizes or types. All housings are in-house developments and have been designed according to the requirements and standards (EN 50171, EN 50272-2). In principle, the electronic components are accommodated separately from the battery.

Depending on the request, the power supply system is available in two separate enclosures (electronics and battery cabinet) as a wall or standing cabinet. There is also the possibility of using a combination cabinet (as shown) , which incorporates the electronic components and the battery in a single cabinet, but separated from each other by an internal partitioning.

The painting is done by default using textured paint in the color RAL 7035. In order to ensure optimal operating and service comfort, the electronic components are built as a 19"-rack, 3U height, in a combination of swing frame and cabinet door which can be optionally equipped with a transparent door. Required racks to accommodate the 19"-modules are mounted in the 180° swiveling door of the cabinet.

Standard cabinets are supplied with a protection class IP20 and IP21*. Production in a higher degree of protection, for example IP54** is also possible.

The connection panel is located inside the cabinet on a mounting plate and is used to connect the appliance to the general power supply, to external reporting and controls, and the connection to the load circuits. As shown in the image, the electronics cabinet provides generous wiring space for wiring the connecting cables without the need for an additional jumper.

Even in swung-open position of the cabinet door the connector panel is easily accessible and not hidden.

Cable inlets are, depending on housing choice, either from the top or bottom possible. Vents provide the necessary air circulation in the electronics and battery compartment.

The battery is located on flat floors. All electronics and battery cabinets can be used as wall or standing cabinet set up individually or combined with each other.

* IP21 Option available only for ML96 series panels upto 24 circuits.
 ** IP54 Option available only for MC6, MN, MNXL, MD32 & ML96 (MLG, MLS & MLW) series panel with additional cost.

Shield - MC6 Series Panel

The MC6 series works in switched mode 230VAC or 216VDC and can be equipped with up to 6 main circuits. One additional circuit is installed by default. This assures the possibility to connect conventional luminaires with electronic ballast and an input voltage of 230V AC/DC. In combination with our innovative LED luminaires energy efficiency, durability, and lighting improvements in all parts of the building can be optimized.

The integrated browser-based visualization software makes the system capable to monitor all connected emergency and rescue route luminaires and report immediately in case of failure.

A certified E30-cabinet is available optional.

Specifications	
Mounting	Wall / Surface Mounted
Case Material	Steel-sheet RAL 7035
Dimensions (H X W X D)	660 x 350 x 230 (mm)
Protection Class	IP20 (Optional IP54*)
Insulation Class	I
Voltage	230V AC 50/60Hz +/- 10%
Switched Mode	230V AC / 216V DC +/- 15%
Battery	216V DC 18 x 12V / 5.2Ah
Battery Power	3h: 0.92A / ~200W
Permissible Temp	10 °C to 35 °C
Max. Connected Load AC	200W (3 hour)

* IP54 Cabinet can be provided with additional cost.

Model	Circuit	Max: Luminaires
SMI102	2	40
SMI104	4	80
SMI106	6	120

Features

- Automated monitoring system acc. to DIN EN 62034 for regular testing of all connected luminaires.
- Independent system with combined switching for non-maintained, maintained and switched maintained luminaires.
- Service friendly 19" modular case.
- Test records are stored at least 5 years.
- Different interface languages possible.
- Management and failure monitoring for up to 20 luminaires per circuit.
- Max. 6 main circuits, as 650VA (SCM32) module and one circuit in non-maintained or maintained mode with max. 150 VA (programmable).
- Maximum connected load (mains) of 2000 VA.
- Information reports about the system, circuits and luminaires as plain text and Control-LED.
- Up to 6 control inputs can be assigned to each circuit.
- Networking of multiple devices via Ethernet (TCP/IP).
- Integrated Web-Server for remote maintenance of the system, visualization of floor plans and much more.

Option	Model	
Line Monitor (three phase net monitoring)	SLM	
Remote Supervision Tableau with LCD Display (Flush Mounted Version available)	SLCD-15	
Switch Query Module	SDM24	
External Printer	BDEXT	
Power Control	SPC230	
Polycarbonate Cover Plate to Protect Against Unauthorized Access (lockable)	PLXMI	
Certified E30 Cabinet (918 X 711 X 365)	E30MIC	

Central Battery System

Shield - MNXL Series Panel

The MNXL series works in switched mode 230VAC or 216VDC and can be equipped with up to 12 main circuits for MN12 panel and up to 32 main circuit MNXL panel. One additional circuit is installed by default for MN12 panel. This assures the possibility to connect conventional luminaires with electronic ballast and an input voltage of 230V AC/DC. In combination with our innovative LED luminaires energy efficiency, durability and lighting improvements in all parts of the building can be optimized.

The integrated browser-based visualization software makes the system capable to monitor all connected emergency and rescuer route luminaires and report immediately in case of failure.

A certified E30-cabinet (not suitable for MNXL) is available optionally.

MN12

MN32XL

Specifications	
Case Material	Steel-sheet RAL 7035
Dimensions (H x W x D)	MN12 - 1100 x 500 x 230mm MN32XL - 1470 x 571 x 230mm
Protection Category	IP20 (Optional IP54*)
Protection Class	I
Voltage	230V AC 50/60Hz +/- 10%
Switched Mode	230V AC / 216V DC ±15%
Battery	216V DC (18 x 12V / 17Ah)
Battery Power (incl. 25% aging reserve)	3h: 2.3A / ~500W
Permissible Temp	10 °C to 35 °C
Max. Connected Load AC	2000 VA
Max. Connected Load AC	500W (3 hour)

* IP54 Cabinet can be provided with additional cost.

Model	Circuit	Max: Luminaires
SMN102	2	40
SMN104	4	80

SMNXL132	32	640

Features

- Central Battery system acc. to DIN EN 50171 for security lighting systems acc. to DIN EN 50172 and systems acc. to DIN VDE 0100-718.
- Automated monitoring system acc. to DIN EN 62034 for regular testing of all connected luminaires.
- Max. 32 main circuits, as 650VA- (SCM32) module and one programmable circuit as maintained or non-maintained circuit.
- Management and failure monitoring for up to 20 luminaires per circuit.
- Use of 230V AC /DC luminaires possible.
- Independent system with combined switching for non-maintained, maintained and switched maintained luminaires.
- Service friendly 19" modular case.
- Test records are stored for 5 years.
- Different interface languages possible.
- Information reports about the system, circuits and luminaires as plain text and Control-LED.
- Connectivity for additional external modules like SDM24, SLM or LCD-15 via RS485 interface.
- Up to 6 control inputs can be assigned to each circuit.
- Networking of multiple devices via Ethernet (TCP/IP).
- Integrated Web-Server for remote maintenance of the system, visualization of floor plans and much more.
- A lockable polycarbonate cover for the controls of the micro control is available as option to protect against unauthorized access.

Option	Model	
Line Monitor (three phase net monitoring)	SLM

E30 Cabinet (1388 X 861 X 365Mm)	E30MIN	

Shield - MD32 Series Panel

Shield - MD32 series panels are a preconfigured central battery system with single luminaire monitoring without additional wires, free programmable circuits and 5-year log book for connecting emergency and security luminaires with LED, fluorescent or halogen lamps. Available either with one or two chargers to 2.5A. The biggest version equipped with 55 Ah batteries, preforms an output of 2300 W for 3 hours.

The circuit module supplies all connected luminaires to the system with electricity. Each outlet can be programmed for circuit monitored systems and for single luminaire monitoring. A combined operation is also possible. The MD32 can hold up to 16 modules of types SCM42 for up to 32 final circuits.

Each module is designed for 2 output circuits, each with up to 20 lights. Each circuit can be programmed as continuous light, maintained light, switched maintained light or a staircase light. Maintained lights and emergency lights can be operated combined. This allows up to 640 emergency or safety lights to be supplied.

Type	Fusing Per Circuit	Maximum Load Per Circuit
SCM42	2 x F6.3A	4A / 860 VA

Specifications	
Case Material	Steel-sheet RAL 7035
Dimensions (H X W X D)	1950 x 600 x 450mm
Protection Category	IP20 (Optional IP54*)
Insulation Class	I
Voltage	3 x 230V AC 50/60Hz +/- 10%
Output Voltage (switched mode)	230V AC / 216V DC
Permissible Temperature	10 °C to 35 °C
Battery (not included)	Maintenance-Free, Closed Lead Acid Cell OGiV, OGi or OPzS
Performance Data	
Incl. 25% Aging Reserve	3h
with 33 Ah battery	≤ 1337 W
With 55 Ah battery	1338 - 2300 W

* IP54 Cabinet can be provided with additional cost.

The built-in web interface with visualization software allows to set up and monitoring the system and the connected lights very comfortable from any networked PC. The position of the installed luminaires can be shown on a stored building plan.

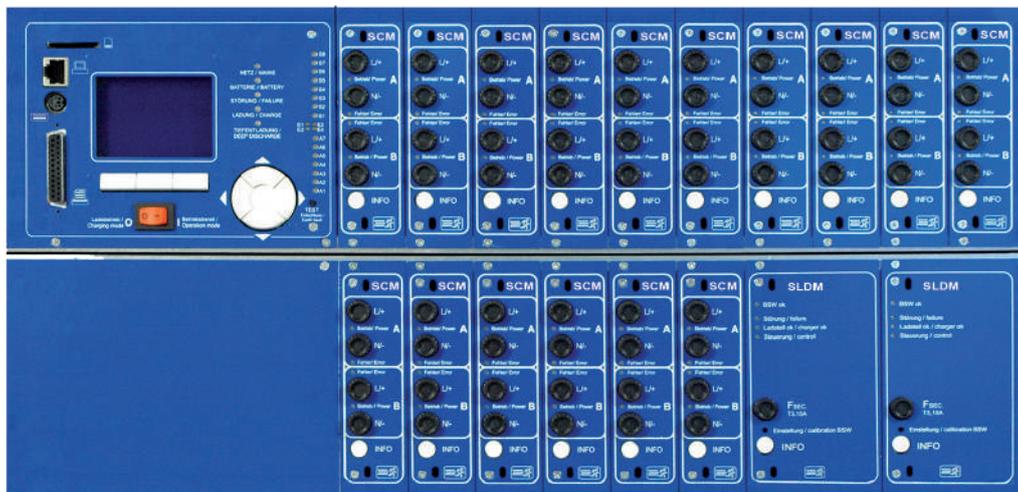

Up to 256 panels can be linked with PC via TCP / IP.

Model	Charger	Circuit	SCM42	Max: Luminaires
MD32	5A	32	16	640

Features

- Central power supply system acc. to DIN EN 50171 for security lighting systems acc. to DIN EN 50172 and systems acc. to DIN VDE 0100-718.
- Automated monitoring system acc. to DIN EN 62034 for regular testing of all connected luminaires.
- Microprocessor-based function control system.
- Memory for test results over 5 years.
- Illuminated large LCD display with plain text display.
- Multilingual switch-selectable.
- Password protected.
- Service contact preprogrammed.
- Easy and understandable programming with 8 buttons.
- Extern PC keyboard for the fastly configuration of the device (PS2).
- Memory-Card (Multi Media Card) Slot for software updates.
- RS-232 interface.
- Centronics printer interface included.
- Ethernet interface.
- Control and monitoring over webbrowser.
- Display of lamp positions and state in a building ground plan.
- Free programmable circuits.
- Up to 6 control inputs can be assigned to each circuit .
- Adaptive mains monitoring at every circuit.
- Selective earth fault check of every circuit.
- Up to 32 circuits in one 19” cabinet.
- Use of electrical circuits modules SCM42.
- Battery charger with IUTQ characteristic for a maximum of battery life.
- Extern modules (network guardian etc.) can be connected and controlled over a bus system.
- Integrated stand socket.

Shield - ML96 Series Panel

ML96 panel is a modular 19" central battery system according to EN 50171 and BGV A3 featuring single light monitoring without additional wiring, free programmable circuits and a 5-year log-book. The system is available in different cases with internal or external battery compartment.

The built-in Web interface with integrated visualization software makes it possible to display even large projects clearly on a building plan. In addition, the test results and incidents of a particular date are retrieved and displayed together with all relevant operating parameters. This minimizes the maintenance costs. The system can be configured by keyboard, on the device itself or through a TCP / IP network connection to a remote PC. The 19" rack design allows to upgrade or exchange modules individually.

The circuit module supplies all connected luminaires to the system with electricity. Each outlet can be programmed for circuit monitored systems and for single luminaire monitoring. A combined operation is also possible. The combined case can hold up to 48 modules for up to 96 electrical circuits modules. Each module is designed for 2 output circuits, each with up to 20 lights. Each circuit can be programmed as continuous light, maintained light, switched maintained light or a staircase light. Maintained lights and emergency lights can be operated combined.

Type	Fusing	Maximum Load Per Module
SCM32	2 x F5A	3A / 2 x 650 VA
SCM42	2 x F6.3A	4A / 2 x 860 VA
SCM62	2 x F10A	6A / 2 x 1300 VA
SCM12E	2 x F5A	A / 2 x 250 VA

The ML96 panel allows the connection of LED lamps, fluorescent lamps or low-voltage halogen lamps. Up to 256 main stations and 32 substations per panel can be linked via a serial or TCP / IP connection to a network. This allows a maximum of a million lights to be connected and monitored to the whole system.

Specifications

Case Material	Steel-sheet, Gray RAL 7035
Dimensions (H x W x D)	Various
Protection Category	IP20 (Optional IP21*, IP54**)
Insulation Class	I
Dimensions (H x W x D)	MLW: 900 x 600 x 450 mm (without battery cabinet) MLX: 1850 x 800 x 600 mm MLS: 1800 x 600 x 450 mm MLG: 1500 x 600 x 450 mm MLK: 1000 x 600 x 450 mm
Cable Entry	from top (900 mm cabinet from below also)
Voltage	3 x 230V AC 50/60Hz +/- 10%
Output Circuits	Max. 96 circuits with switchover for non-maintained or maintained operation
Battery	Maintenance-free, closed lead acid cell OGiV, OGi, OPzS or low-maintenance NiCd batteries
Output Voltage	230 V AC / 216V DC
Permissible Temperature	10 °C to 35 °C

* IP21 option available only for ML96 series panels upto 24 circuits.

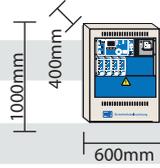

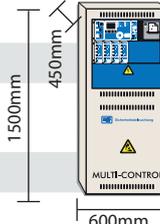

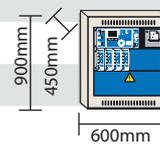

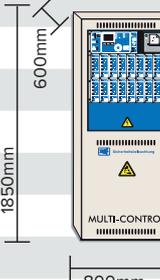

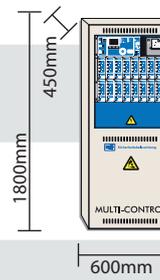

** IP54 option available only for MCG, MN, MNXL, MD32 & ML96 (MLG, MLS & MLW) series panel with additional cost.

Features

- Central power supply system acc. to DIN EN 50171 for security lighting systems acc. to DIN EN 50172 and systems acc. to DIN VDE 0100-718.
- Automated monitoring system acc. to DIN EN 62034 for regular testing of all connected luminaires.
- Microprocessor-based function control system.
- Redundancy in CPU.
- Memory for test results over 5 years.
- Illuminated LC-Display with plain text display.
- Multilingual switch-selectable.
- Password protected.
- Service contact pre-programmed.
- Easy and understandable programming with 8 buttons.
- External PC keyboard for fast configuration of the device (PS/2).
- Memory-Card slot (Multi Media Card) for software updates.
- Optionally recessed printer.
- Ethernet interface.
- Control and monitoring over web browser.
- Display of lamp positions and state in a building ground plan.
- Mains circuits SCM with 1A, 3A, 4A and 6A nominal current
- Free programmable circuits.
- Adaptive mains monitoring at every circuit.
- Selective earth fault check of every circuit.
- Up to 96 circuits in one cabinet.
- Battery charger with IUTQ characteristic to maximize the battery life.
- Extern modules (network guardian etc.) can be connected and controlled over a bus system.

Mains Connection	3 x 230V AC 50/60Hz +/- 10%				

ML96 SUBSTATIONS

Substations offer the same features as the ML96 main system. The substation features all programming options and interfaces of the main system. Substations offer single luminaire monitoring without additional wiring like the main system. Also available in E30 version.

Specifications

Case Material	Steel-sheet, Gray RAL 7035
Protection Category	IP20 (opt. IP54*)
Insulation Class	I
Cable Entry	from Top (900 mm cabinet below also)
Voltage	3 x 230V AC 50/60Hz +/- 10%

The Whole System (central unit or substation) is Capable to Handle up to 96 Circuits.

* IP54 Cabinet can be provided with additional cost.

Substations / Subdistributions possible				

The system software of the NLSR is developed and improved by a development team constantly. With the integrated MMC-Slot a firmware update is a breeze.

The integrated boot loader gives the electrician the opportunity to perform system maintenance without any programming knowledge. Thus it is easy to adapt the system to future changes in regulations.

The built-in control unit Ethernet interface allows the system completely to be programmed and monitored via the web.

Moreover, in case of service a remote maintenance by the manufacturer is possible. The power supply is integrated into the existing building network.

If there's no laptop or network connection available to set up the system it is of course possible to configure the system with any standard PS/2 keyboard.

The simple navigation with the cursor keys to select the configuration is simply out of hand.

The built-in centronics interface makes the use of PCL6 standard printers for printing status reports possible.

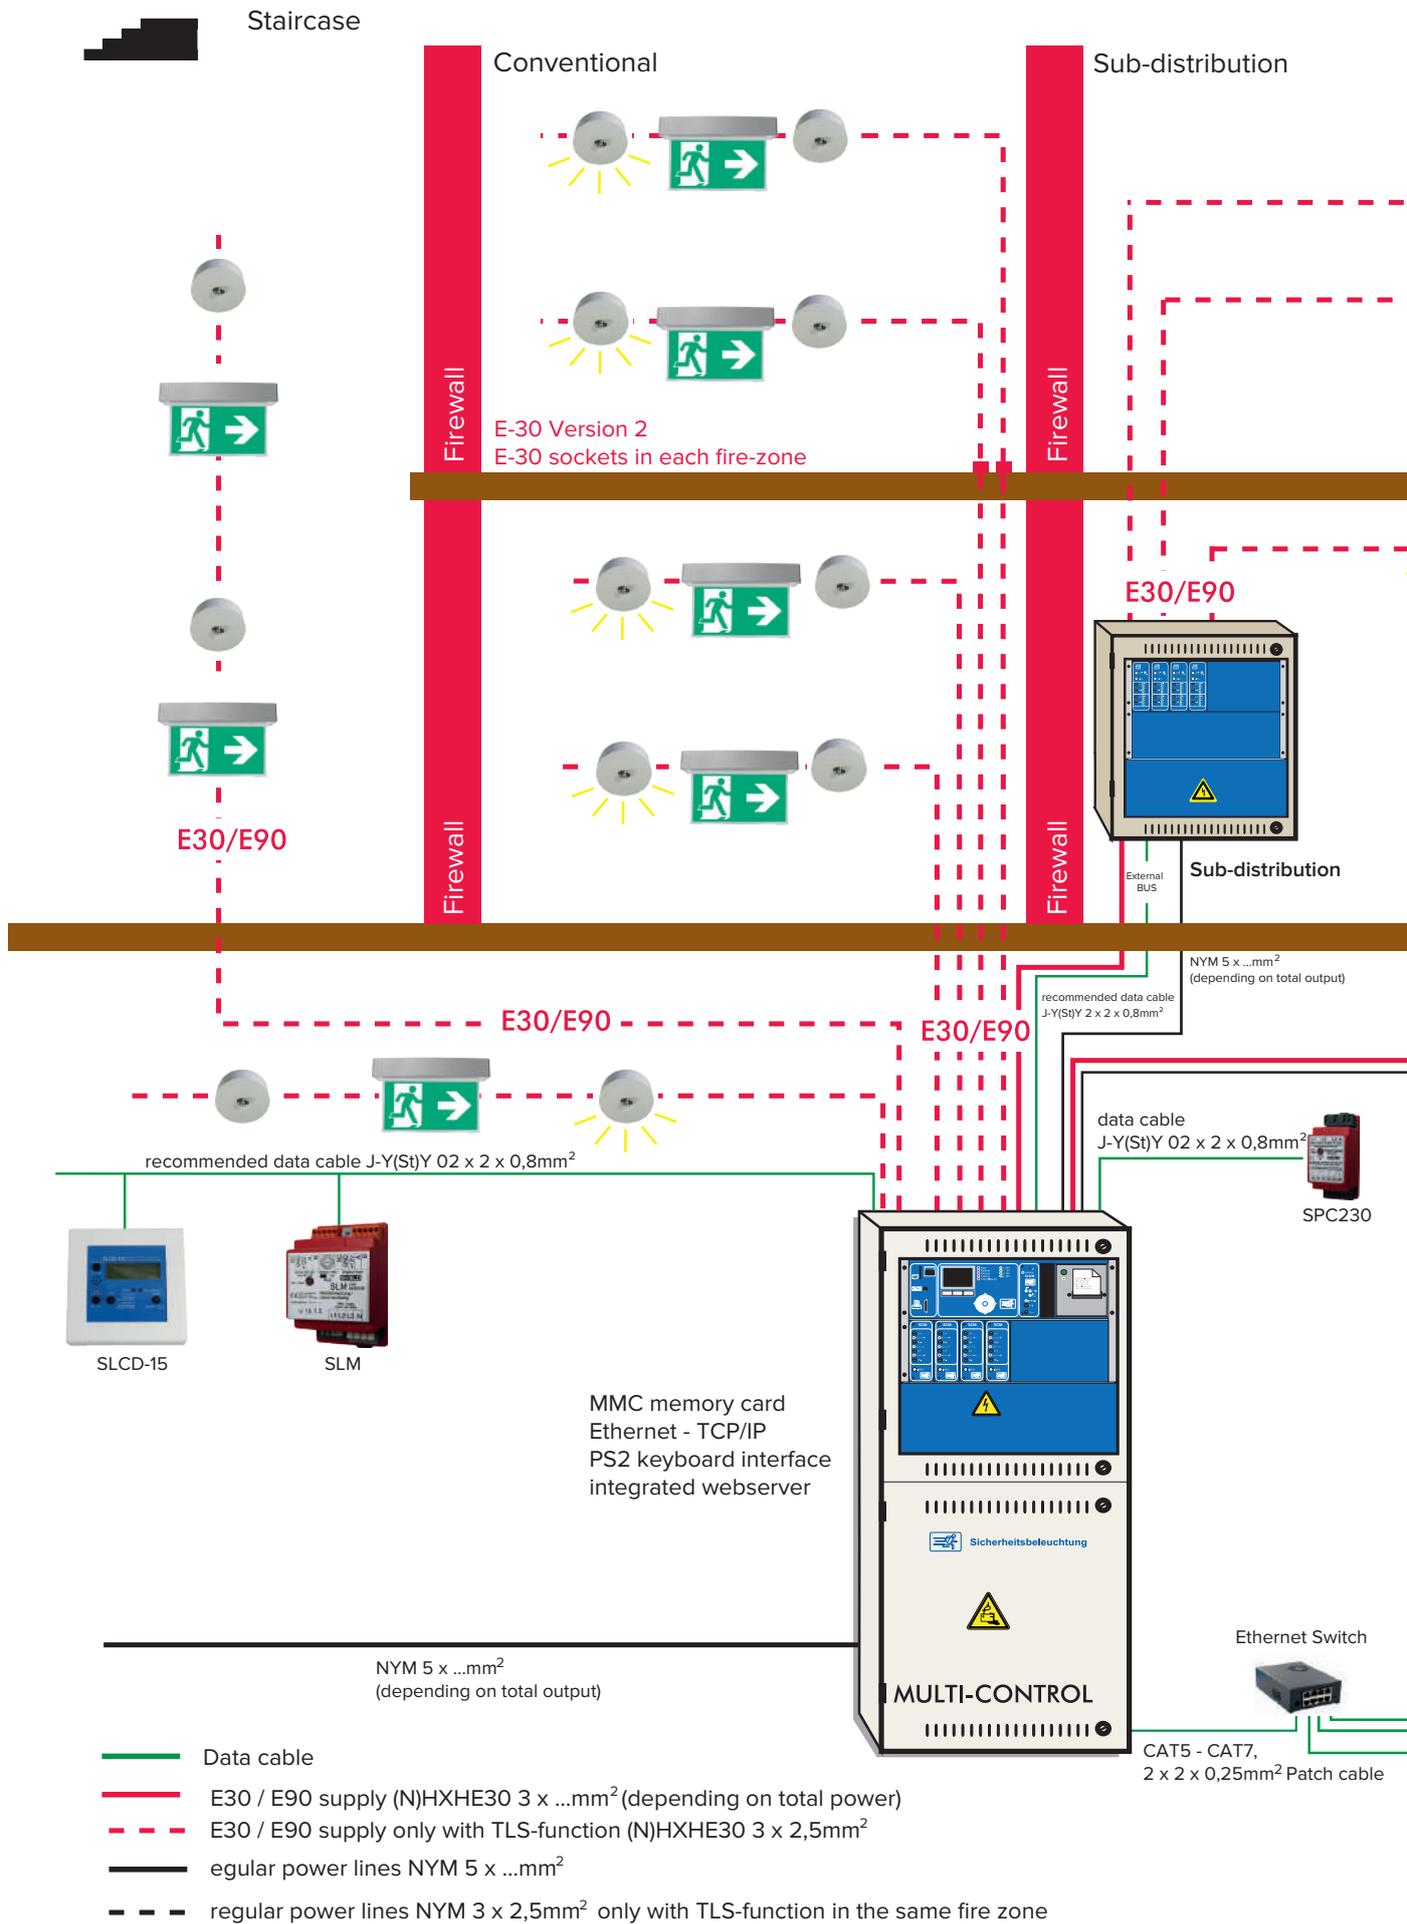

In most cases a built-in printer is obsolete.

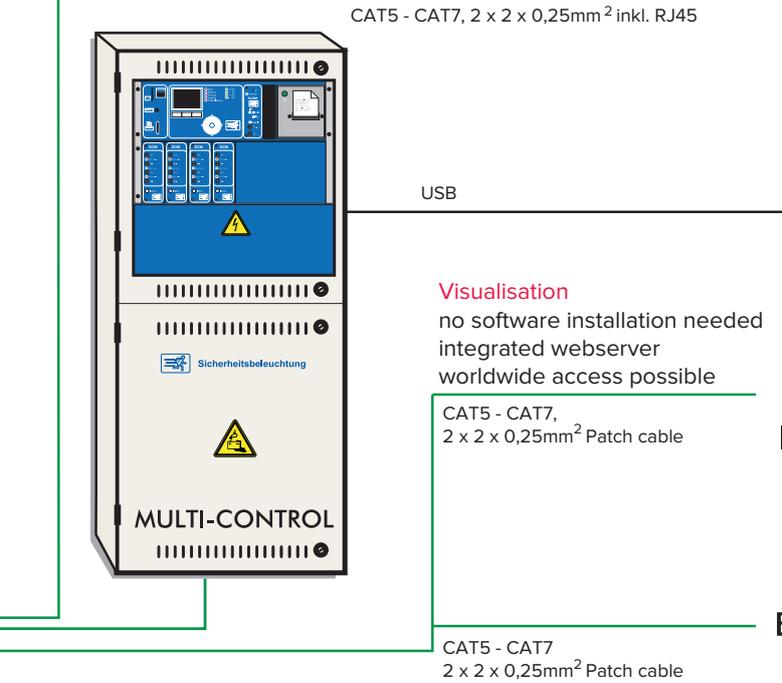

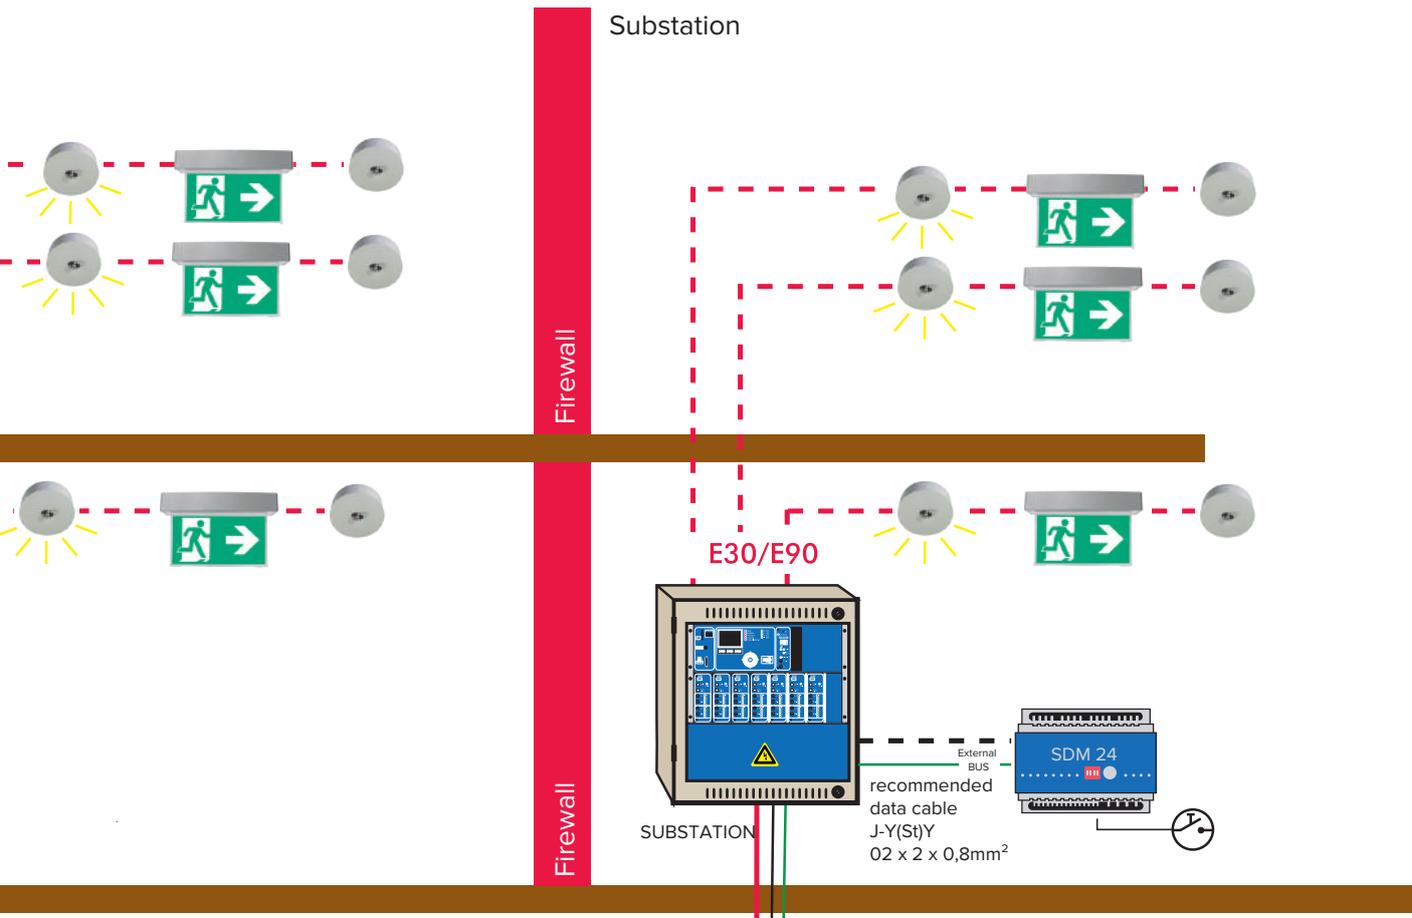

Three quick keys directly below the display are alternately used for the main commands.

Even without external input or control device the navigation of the system softwares menu structure is no problem – thanks to the 4-way navigation buttons.

M20

The M20 LED emergency luminaire is a true all-rounder series of emergency lights. They are ready for almost all requirements and provide always the right solution. As many as four different lenses for different light distribution are available and make a perfect adaptation to the respective mounting situation possible. These units can be used in surface and recessed mount locations.

Model	Description
M20CSH	Corridor Illumination Surface Mount, IP40
M20CRH	Corridor Illumination Recessed Mount, IP20
M20RSH	Radial Illumination Surface Mount, IP40
M20RRH	Radial Illumination Recessed Mount, IP20
M20HSH	High Ceilings Surface Mount, IP40
M20HRH	High Ceilings Recessed Mount, IP20
M20SSH	Spotlight High Ceiling Surface Mount, IP40
M20SRH	Spotlight High Ceiling Recessed Mount, IP20

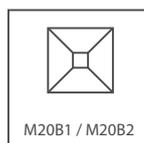

Technical Data	
Emergency Duration	3 hours
Max. Consumption	4.6 W LED
Lumen Output	360 lm
Ambient Temperature	-5 °C up to +40 °C -20 °C up to +30 °C (in M20 - IP65 housing)
Ingress Protection Rating	IP20 (recessed) IP40 (surface)
Protection Class	II
Mounting Type	Surface, Recessed
Housing	Polycarbonate, White
RAL Code	9003

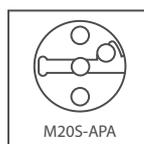

Accessories

IP65 housing for surface mount luminaires (white or anthrazite).

Square covers.

Adapter plate for lateral cable feed to surface luminaires.

For easy opening of recessed luminaires, an optional opener is available.

M30

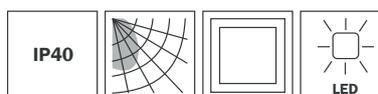

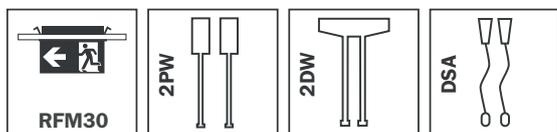

M30 Compact Polycarbonate luminaire for universal mounting for the lighting of escape and rescue routes according to DIN EN 60598-1, DIN EN 60598-2-22 and EN 1838. Available for central power systems.

Model	Description
M30UH	Universal Mount Emergency Luminaire

Technical Data	
Emergency Duration	3 hours
Max. Consumption	5.2 W LED
Lumen Output	520 lm
Ambient Temperature	-5 °C up to +40 °C
Ingress Protection Rating	IP40
Protection Class	II

Housing	Polycarbonate, White
RAL Code	9003

Electronics Box

Dimensions

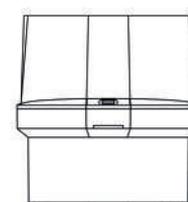

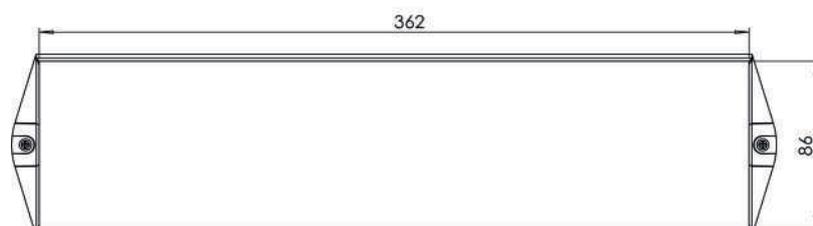

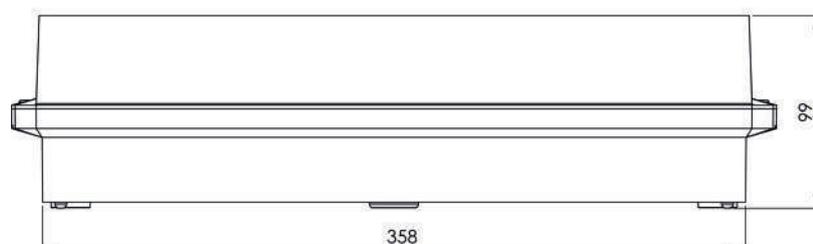

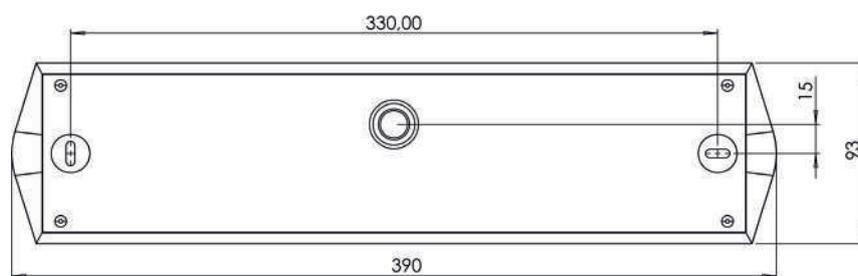

M50

Classic bar-shaped polycarbonate luminaire for wall or ceiling mounting. Straight lines as well as the robust construction with a high ingress protection allow versatile use.

Technical Data	
Mounting	Universal
Illuminant	LED
Housing material	Polycarbonate
Colour	RAL 9003
Mechanical rating IP	65
Impact resistance IK	6
Protection class	2
Power consumption max.	9,4 W
Weight	0.67 Kg
Lumien Output	1050

Model	Description
M50UH	Wall/Ceiling Mount Emergency Luminaire, IP65, Shield

X10

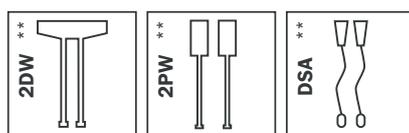

LED exit sign / emergency light according to DIN EN 60598-1, EN 60598-2-22, EN 7010 and DIN EN 1838.

Cuboid Polycarbonate housing, discreetly reduced on the significant in design lamp. Modular design and universal mounting for use as emergency luminaire with and without the application of pictograms. The modular system allows the light to be converted at any time without dismantling and tools to a exit sign luminaire.

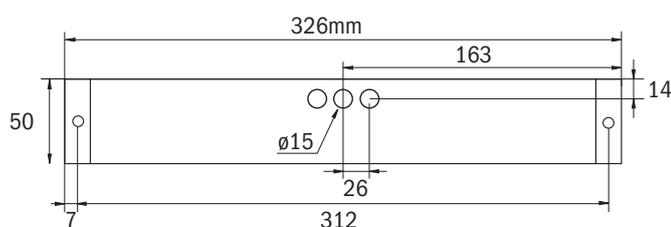

Model	Description
X10UL	Universal Mount Emergency Luminaire, 340 lm
X10UH	Universal Mount Emergency Luminaire, 560 lm

Technical Data	
Emergency Duration	3 hours
Max. Consumption	5.2 W LED
Ambient Temperature	-30 °C up to +40 °C
Ingress Protection Rating	IP64
Protection Class	II
Mounting Type	Universal

Exit Luminaires

X30

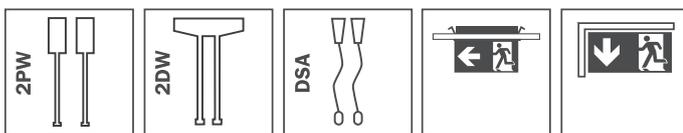

Emergency sign luminaire in accordance to DIN EN 60598-1, DIN EN 60598-2-22 and DIN EN 1838.

Slim, elegant, synthetic luminaire tilted towards the viewer, continuously symmetrically tapered towards the bottom. For universal mounting (wall/ceiling surface mount/integrated ceiling mount/brackets). For mounting convenience, the luminaire consists of only 3 parts. Tool free mountable on the quick assembly integrated ceiling mounting or wall mounting system. The luminaire has zero potential when dismantled. Suitable for continuous mode or stand-by mode. Reliable planning due to a tool free and variable, on-site use of the pictograms. Set of pictograms (left, right, bottom, neutral) is included in the scope of delivery.

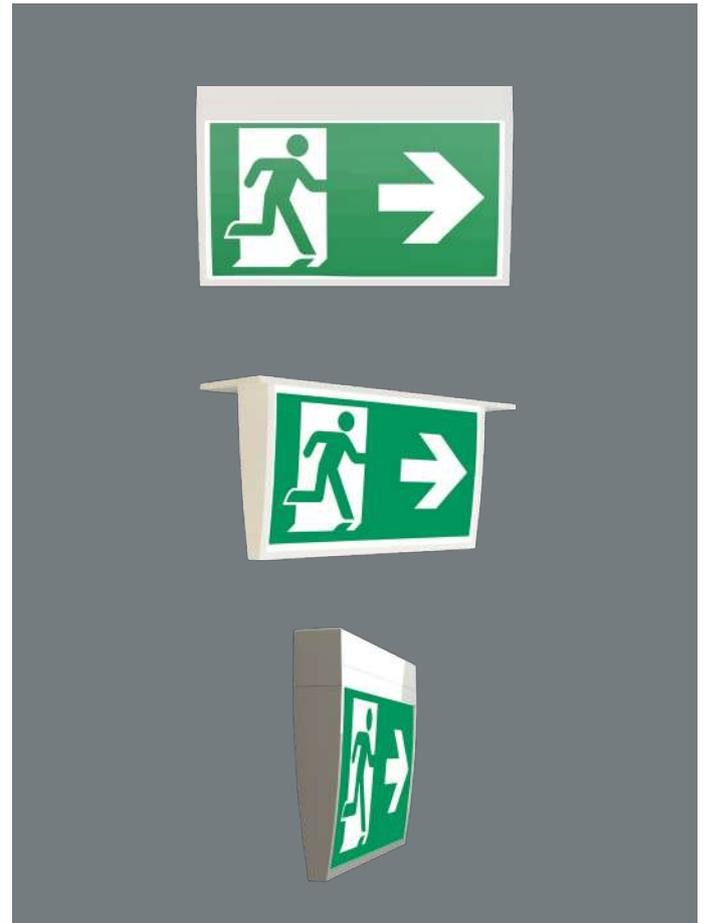

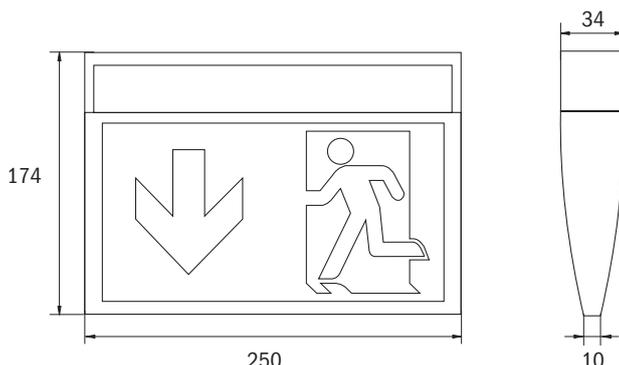

Model	Description
X30UL	Universal Mounting Exit Luminaire

Technical Data	
Emergency Duration	3 hours
Max. Consumption	3.2 W LED

Emergency & Exit Luminaires

X40

Slightly curved high-grade exit sign and emergency luminaire in Polycarbonate for Universal mounting. Signage with pluggable, solvent-free, internally mounted pictogram. Pictogram set included. This luminaire can be used without pictogram as an emergency lighting luminaire with a clear cover. Escape route/ Exit sign/ emergency luminaire according to EN 60598-1, EN 60598-2-22 and EN 1838 norms.

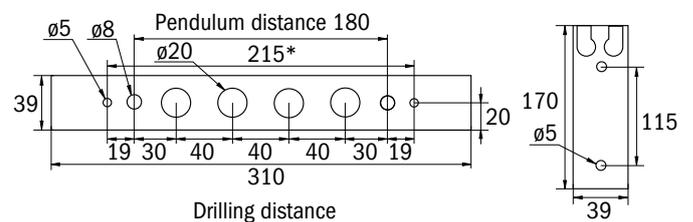

Model	Description
X40WL	Universal Mount Emergency / Exit Luminaire, 300 lm
X40WH	Universal Mount High Power Emergency Luminaire, 520 lm

Technical Data

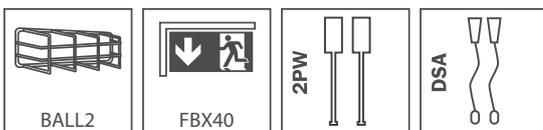

Emergency Duration	3 hours
Max. Consumption	5.2 W LED

Modules

Electric circuit modules

The mains circuit module **SCM** is an electronic module in service-friendly 19" rack technology and used for the power supply of safety and rescue sign luminaires in mains circuits of security lighting. The circuit module is equipped with two separate circuits inclusive of hedging, each circuit has its own independent switching. For different output powers the following circuit modules are available:

TYPE	FUSING PER CIRCUIT	MAXIMUM LOAD PER MODULE
SCM12E	2x F5A	2x 250 VA
SCM32	2x F5A	2x 650 VA
SCM42	2x F6.3A	2x 860 VA
SCM62	2x FF10A	2x 1300 VA

Each circuit module is able to monitor up to 20 lights with single luminaire monitoring and/or can set up a self-calibrating circuit monitoring.

Through the combined operation of non-maintained light, maintained light and switched maintained light, the number of mains circuits needed can be reduced.

The circuit module monitors the connected lights or the circuit on: lights error, power failure, ground fault in the circuit, Overload the circuit, Output fuse blown and shows this by means of the integrated fault LED. Using the INFO button a status query of the module is shown in the display of the central unit.

Closed current loop, line monitor

The three-phase power supply monitoring **SPC230** primarily serves to monitor AV networks (voltage supply to general lighting).

A maximum of 3 phases which lead an alternation voltage from 230V against the neutral conductor are checked. The switching threshold for recognising a mains failure or a severe mains fluctuation lies at 85% of the nominal mains voltage (230V AC), i.e. at approx. 195V AC. For evaluation, two changeover contacts are used with a maximum rating of 2A at 30V DC or 230V AC. The shift-in occurs automatically. Enclosure for DIN-rail TS35. Dimensions: H=44mm, W=54mm, L=96mm.

Modules

Charger module

The charging module **SLDM25** is an module in service-friendly 19" rack technology and is used for charging of battery packs in safety power supply systems according to European and national standards.

The charging module SLDM25 works in conjunction with a isolated transformer according to IUP (TS) which is necessary for galvanic isolation and adjusted to the output power. Charging characteristic according to EN 50272-2. All SLDM25 charging modules run a software controlled charging process and thus operate independently of the central processing unit.

To save energy and extend the life of the batteries and charging modules, the SLDM25 operates according to a predetermined temperature curve stated by the battery manufacturer and depending on the battery voltage symmetry.

The SLDM25 limits depending on the system requirements the output current to 0.5A , 1.0A or 2.5 A. To increase the output charging current multiple charging modules are connected in parallel.

Further more the charging characteristics of various batteries can be programmed. The pre-programmed charging characteristics of the battery types, NiCd, OGI/OpzS/OPzV or OGiV can be chosen. An integrated, redundant battery voltage monitor (BSW) protects the battery from overcharging again.

Luminaire monitoring module

The **MU05** module is a addressable controller for use in a safety luminaire. This controller offers all switching modes and can operate a single luminaire survey. The consumers can be monitored with an auxiliary line. The general advantages are:

- compact design
- consumers load 4 up to 200 VA
- 2,5mm² connectors with bypass connection
- local power supply monitoring
- S S disable external dimming voltage

The power supply monitor allows connected luminaires being operated in maintained and non-maintained mode. In case of a general mains failure all luminaires are switched on.

The MU05 is designed to work with power supply systems of the following types: MC6, MNXL, MD32 & ML96 Panels.

Dimensions: H=22mm, W=29mm, L=142mm.

Modules

Input and output module, light switch query module

The **switching input and output module IO** has 7 relay outputs 230V / 6A with potential-free changeover contacts. The IO module no. 1 is programmed to connect a conventional alarm panels.

Furthermore, the IO module has 4 isolated switching inputs 18V DC – 120V DC with selectable polarity. Individual message texts are possible.

Factory default assignment of Inputs and Outputs

K1:	Emergency light blocked	(20-21)	Operative	(19-20)
K2:	Charger error	(22-23)	Charger okay	(23-24)
K3:	Mod. stand-by	(25-26)	Normal operation	(26-27)
K4:	Device error	(28-29)	Device okay	(29-30)
K5:	Deep discharge battery	(31-32)	No deep discharge	(32-33)
K6:	Fan off	(34-35)	Fan on	(35-36)
K7:	Mains operation	(17-18)	Battery operation	(16-17)
E1:	Connection external operating mode selector		Voltage on – emergency light blocked; 0 volts – operative	
E2:	Connection temperature sensor		Voltage on – temperature too high / low; 0 volts – temp okay	
E3:	Connection air stream monitor		Voltage on – fan error; 0 volts – fan okay	
E4:	Connection external test switch or shutdown for firefighter emergency switch		Voltage on – test function; 0 volts – no test function	
			Voltage on – emergency lighting system off; 0 volts – operative	

The switch query module **SDM24** can be used for the common query of light switches of the general lighting and safety lighting. The module is equipped with 8 (7+1) switching inputs which can be connected either with 185-255 VAC and / or 18-255 VDC.

In addition, the SDM24 has an integrated, activatable 3-phase monitor to monitor the supply voltage of the general lighting. Additional switching lines to the security lights are not required. The module has two RS 485 bus connectors for continuity and/or star-shaped wiring for additional SDM or SLM modules. The supply carried over the bus-line can be boosted on the module using the activated repeater function.

An integrated bus-line monitoring activates in case of short-circuit or open-circuit detection the immediate switching on of all the circuits of the system.

Addressing is performed using a rotary coding switch. The color red LED indicate general errors, switching states of the inputs and normal operation. Freely programmable assignment of independent inputs of each emergency lighting circuit and the designation of the inputs in plain text per bus module are set up in the central control unit. Enclosure for DIN-rail TS35.

Dimensions: H=65mm, W=85mm, D=105mm

Modules

Control panel

The **SLCD15** is a remote display, which ensures the Notifications of the safety power supply system to be shown even in case of a mains failure by a power supply. This remote panel is optional available with a button or key switch as operating mode selector.

With the help of this button/key switch blocking of the emergency operation is possible during off-season periods or holidays. With the key switch unauthorized use of the remote display is also prevented. The blocking of the emergency operation does not affect the batteries in charge conservation in mains operation.

The 3-line display with 16 characters per line states information in plain text about the following status information of the safety light system :

- Battery voltage
- Mains voltage
- Battery ambient temperature
- System error

An integrated bus-line monitoring activates in case of short-circuit or open-circuit detection the immediate switching on of all the circuits of the system.

Three additional LED indicators provide visual information on:

- System ready
- Battery-/mains
- System error

An acoustic signal is given in case of failures.

	SLCD-15	SLCD-15S	SLCD-15U / SLCD-15SU
Terminals	0.4 - 0.8mm ² Rigid or Flexible	0.4 - 0.8mm ² Rigid or Flexible	0.4 - 0.8mm ² Rigid or Flexible
Recommended Connecting Cable Mounting	Wall	Wall	Recessed Wall
Cable Feed	Top / Back / Side	Top / Back / Side	Back
Dimensions in mm	117 x 117 x 26 (H x W x D)	117 x 117 x 26 (H x W x D)	20 x 120mm Cutout 120 x 120mm

Modules

Line monitor

The **SLM** (Line Monitor) serves to monitor AV networks (voltage supply to general lighting).

The SLM line monitors for connection to the emergency lighting system.

With the SLM it is possible to monitor three phases, e.g. a general mains distribution. The switching threshold for recognising a mains failure or a severe mains fluctuation is between 60% and 85% of the nominal mains voltage (230V AC), i.e. at approx. 195V AC.

The SLM is connected to the system with a monitored BUS line. This makes the installation of fire-resistant cables obsolete.

Dimensions: H=54mm, W=54mm, D=96mm.

Ethernet switch

The **Industrial Ethernet Switch** is a 5 or 8 port switch with each port featuring Auto-negotiation and auto MDI/MDI-X detection for networking of several power supply devices or connecting a device to the building control. Existing 10Mbps networks can now be upgraded effortlessly to higher speed 100Mbps Fast ETHERNET networks.

By supply of the switch from the central battery system the communication between the system, a central point or remote maintenance is possible even in case of power failure.

Modules

Building control engineering access

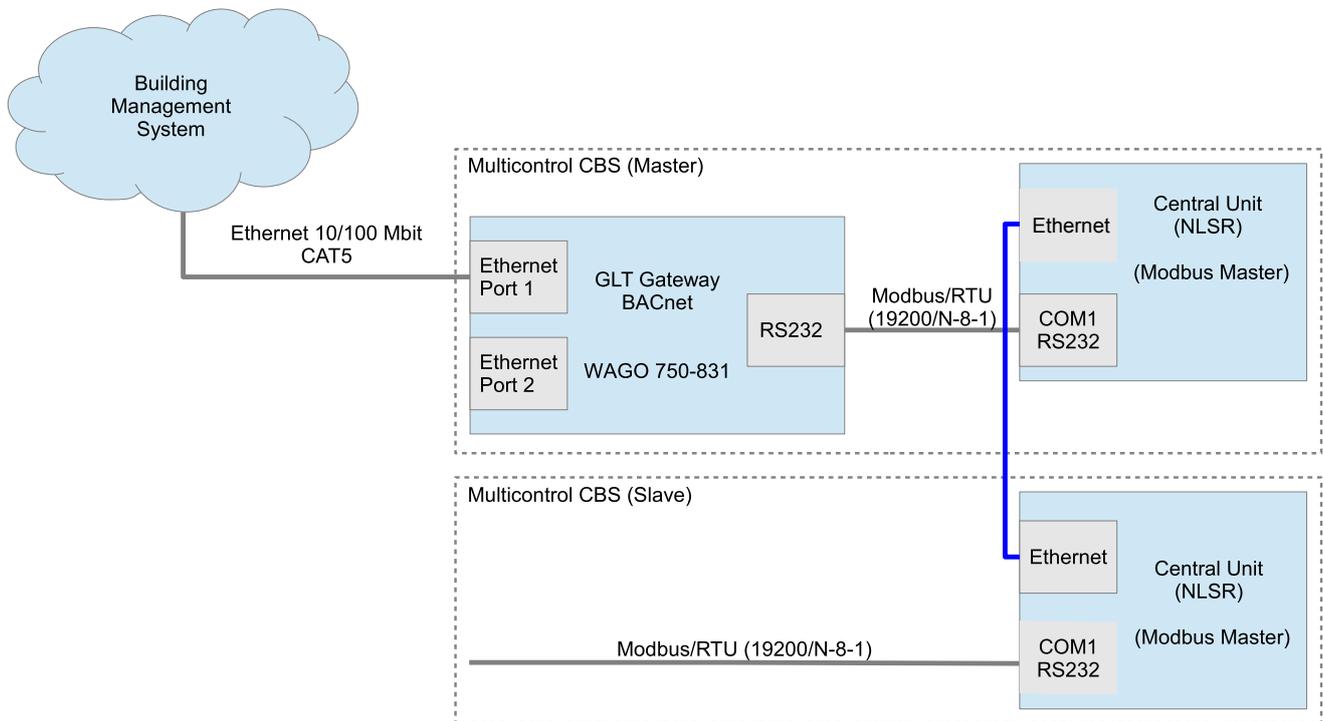

For connection to building control systems GLT Gateway supports the Modbus or BACnet protocol.

The access of the GLT to the system data is performed via Modbus/TCP or OPC (KNX on request). All typical BACnet features like BBC-profile for standard BACnet-building-controller are supported.

Depending on the desired depth the information can be programmed from the panel up to single luminaire level. Light errors for each light, circuit errors for each circuit (insulation, fuse, current monitoring), condition of the system (BAS, collective malfunction, etc.), error messages of the station (error memory), measurement values (mains, battery, etc.) are read off.

When networking several devices it is possible to equip the master system with a full GLT Gateway only and query the substations with limited information only.

Custom made programming are possible on request.

Modules

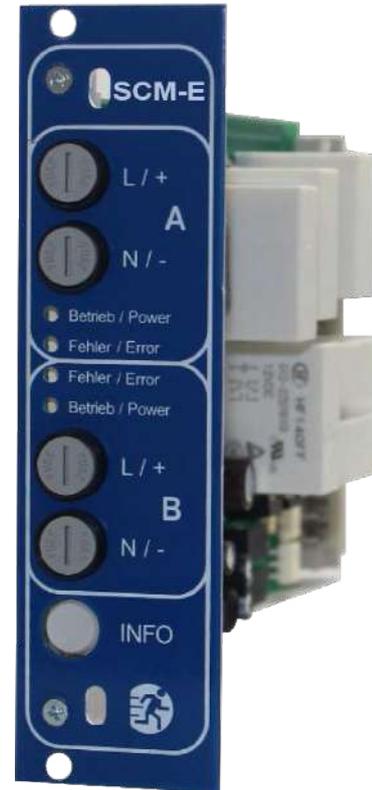

Single luminaire switching

Current luminaires and luminaire modules can be switched individually and without additional line in connection with the use of the SCM12-E circuit module.

In contrast to the conventional SCM32/42/62, it is possible to assign the operating mode of individual luminaires via the emergency lighting system. The configuration of the operating mode via the DIP switches on the luminaire is not necessary. The addressing of the luminaire, as well as the mains monitor function, must also be configured according to the description on the luminaire (DIP switch). The setting of the different dimming stages / flashing types is also configured on the luminaire (DIP switch / jumper), please refer to the respective product information.

The SCM12-E mains circuit module is a circuit module for use in systems of the multiControl plus safety lighting systems series, such as MD32, MNXL & ML96. Like the SCM32/42/62, the SCM12E is equipped with two circuits ("circuit A" and "circuit B"), each circuit being designed for a maximum output current of 1A (250VA). Of course, the SCM12E has a current, circuit and luminaire monitoring as usual.

The configuration of the circuit parameters (number of luminaires, mode of operation and switching commands) can be conveniently done via the web interface (see the following figure). The mixing of conventional luminaires (modules) with single luminaire switching-capable luminaires is not permissible.

Batteries

The integrated ventilation slots are designed for the maximum possible battery capacity.

Battery Monitoring Module

BAT-LOGG® – Battery Monitoring for Central Battery Systems

Regularly monitoring the battery condition helps to detect defects in time in order to replace defective batteries before they cause damage to the remaining ones.

But let's face it: Nobody likes to tamper with a multitude of batteries in narrow space. That's reason enough to consider introducing an automatic monitoring system, especially as the amendment standard EN 50171 requires that battery conditions be checked every 5 minutes... e.g. using BAT-LOGG®!

BAT-LOGG® is an automatic monitoring system for batteries which checks and logs the status of each single battery block in a system in short time intervals. By doing so, BAT-LOGG® not only contributes to the safety and reliability of the system, but also helps to reduce maintenance efforts and costs. BAT-LOGG® was specifically designed for easy installation in narrow locations, and is also extremely cost-saving thanks to its minimalist design.

How it Works

BAT-LOGG® Sensor modules measure the voltage and temperature of each single battery. Each module is simply connected to the poles of a battery and glued to the battery case in order to measure its temperature reliably.

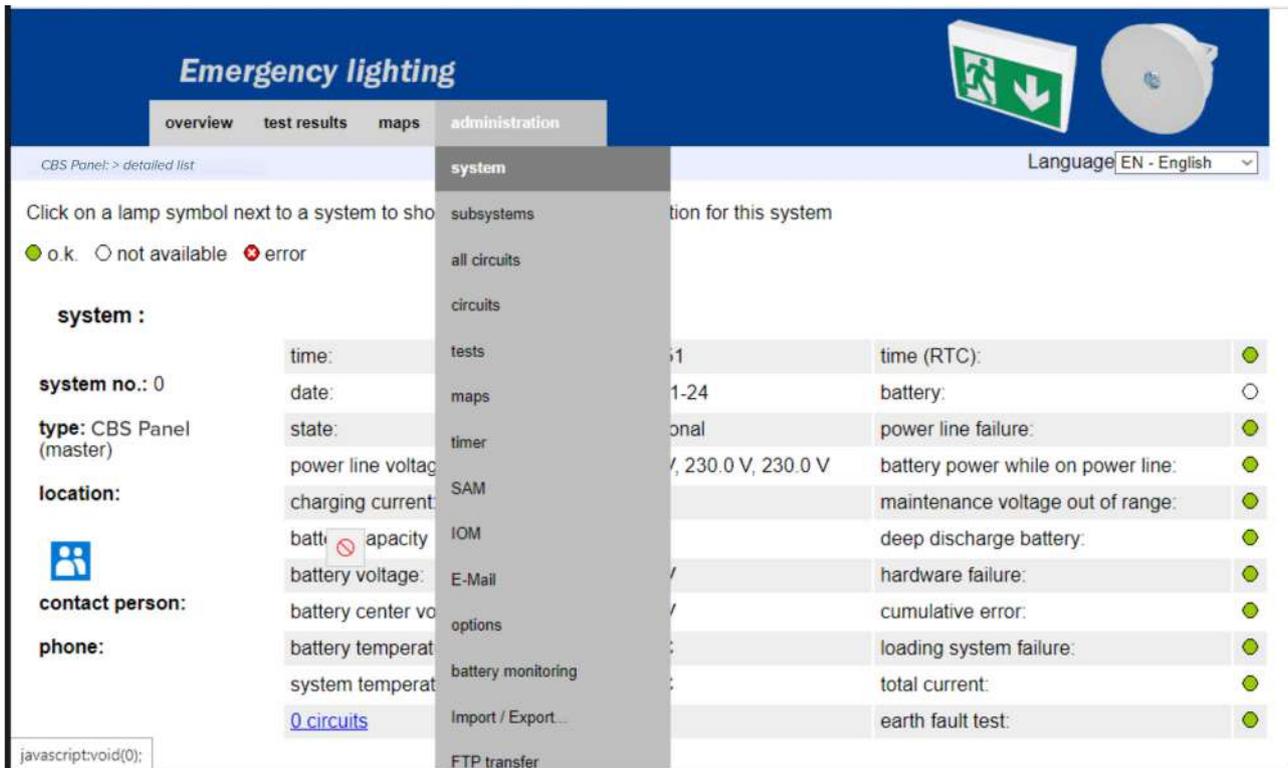

The measurement data is transmitted over the power line to a BAT-LOGG® Interface module. The module checks all measurement values and generates an error message if one or more of them lie outside the preset limits. Further, a potential-free relay contact notifies of any error event (collective fault).

The control unit of the power supply system retrieves all measurement data and error messages via a serial communication port and stores them. Messages and data regarding each single battery, including current measurement values and data log, can be viewed using the system's LC display panel and Web Interface.

System Specifications

Specifications

Monitored Battery Type	Lead-acid Batteries with 12V Block Voltage (nominal)
Maximum System Voltage	800V DC
Voltage Measurement Range (Accuracy)	9.0V - 16.0V ($\pm 0.1V$)
Temperature Measurement Range (Accuracy)	0°C - 60°C ($\pm 3^{\circ}C$)
Max. Number of Sensors Supported	Max. 160 BAT-LOGG® Sensor Modules
Measured Values	<ul style="list-style-type: none"> • Battery Voltage • Battery Temperature 1) • Discharging Voltage 2)
Measuring Frequency	Once per 15-20 Seconds
Data Logging Functions 3)	<ul style="list-style-type: none"> • Once a Day, Minimum and Maximum Value of Voltage and Temperature Over The Last 24 Hours, and Status Information on Each Battery • Upon Each Test: Measurement Values Taken Before and After The Test, Including Discharging Voltage of Each Battery
Monitoring Functions	<ul style="list-style-type: none"> • Display of All Measurement Values 3) • Display of The Daily Data Log and Test-Related Data 3) • Notification Issued • On Data Transfer and Communication Failure • On Over-/Undervoltage in any Battery • On Excessive Voltage Deviation from Average • On Over-/Undertemperature in any Battery • On Excessive Temperature Deviation from Average
Other Functions	<ul style="list-style-type: none"> • Operation Hour Counter for each Battery • Histogram Analysis for Assessment of The Operation Conditions of Each Battery 4)

BAT-LOGG® Sensor

Operating Voltage	12V (nominal) from Lead-Acid Battery
Led Indicator	Measurement Activity + Battery Voltage
Measurements (W X H X D)	54mm X 54mm X 15mm
Protection Marking Acc. Din En 60529	Ip 40
Protection Class Acc. IEC 61140	II
Flammability of Housing Material Acc. UI94	V-0
Connection / Mounting	<ul style="list-style-type: none"> • Connection to Battery Poles with 6mm Faston Connectors • Glue to Battery Housing
Connection Cable	Double-Isolated, Short-Circuit Proof Cable, Length: Approx. 28cm
Average Current Consumption	< 0.2mA (1.76Ah/Year)
Mounting Location Requirements	Degree of Pollution Rated 1 or 2 Acc. EN 50178

Batteries

System Specifications

BAT-LOGG® Interface

Operating Voltage	216V DC or 230V AC (nominal)
Supported Number of Batteries	Max. 160 BAT-LOGG® Sensor Modules
Interfaces	<ul style="list-style-type: none"> • 2 Serial COM Communication Interfaces for Data Exchange • Single-pole Switchover Relays Contact for Collective Fault Indication
LED Indicators	<ul style="list-style-type: none"> • Collective Fault (red) • COM-communication (green) • Measurement Data Received (green) • Power On (green)
Measurements (W x H x D)	(DIN Hat-rail Module, 31 HP)
Flammability of Housing Material Acc. UL94	<ul style="list-style-type: none"> • Degree of Pollution Rated 1 Acc. EN 50178 • For Nominal System Voltages > 216 V DC, an Additional Protection Cover is Required

Annotations: 1) Measured on the outer side of each battery. 2) Lowest voltage measured in each discharging cycle. 3) Functions available only in connection with emergency lighting systems of type MD32 firmware version 1.7.9 or higher. Full functionality is available through the Web Interface of the system; however, part of the functionality is not available in the LCD menu for technical reasons. 4) Separately counting the operating hours for which voltage and temperature were inside pre-define ranges (six voltage and six temperature ranges); these values allow for a verification of the thermal conditions and the charging/discharging operation of each battery. 5) LED flashing signals the carrying-out of a measurement and the transmission of the measured values. LED flashing twice: battery voltage is > 10,8V; LED flashing once: battery voltage is ≤ 10,8V. 6) Connecting tabs for M5/6/8 screw poles are included with the modules. 7) Double-sided adhesive strips are included with the modules. 8) Cable with Faston connector, connected to the module.

Benefits from Using BAT-LOGG®

The BAT-LOGG® system can be installed quickly and inexpensively. Through automatic measuring, it saves valuable working time during the regular on-site inspection, and guarantees traceable measurement data without gap over each battery's entire period of use.

Other benefits: Less on-site operations, no more routine measurements, reduced time for traveling and maintenance, reduced operational hazards (such as electric shock), price advantage for the end user.

Batteries

System Built-up Details

The table below helps you selecting the correct system configuration: First, find the total number of circuits of your system in the leftmost column. The column "System Type" shows you the matching system types. Now, in the column corresponding to the required Supply Time (3h), look for the row showing a battery power (value in Watts to the left of the slash*) greater than or equal to the required total DC power consumption of the planned system. The value to the right of the slash now gives the number of charger modules the system must have**, while the right-most column shows you the Battery Type required***.

* Maximum actual total DC power consumption of the planned system.

** The number of charger modules given ensures that the batteries will be re-charged to 80% of their nominal capacity within 12 hours according to EN 50171

*** This battery type selection takes into account 25% of additional reserve as required by EN 50171. System Types and Battery types can only be combined as given in the table. Thus, even for a smaller number of circuits, a bigger system type might be required.

Circuits	System Type	3h	Battery Type
≤ 6	MC6	200 W / 1 SLDM	OGiV 1252 LP
≤ 12 (≤ 32)	MN12 / MN32 XL	500 W / 1 SLDM	OGiV 12170 LP
≤ 32	MD32	1337 W / 1 SLDM	OGiV 12330 LP
		1338 W to 2300 W / 2 SLDM	OGiV 12550 LP
≤ 96	ML96	2301 W to 12834 W / Max. 6 SLDM	OGiV 12550 LP to OGiV 122600 L

Batteries

Battery – OGiV Type

In case of emergency the safety and rescue sign luminaires are powered by maintenance free acid batteries of type OGiV in all emergency light systems. These are designed according to DIN EN 50272-2 and DIN EN 50171.

The designed lifetime of these batteries is in 20° C ambient temperature 12 years.
